

“ The AS/400 provides robust reports...but it is hard to find the information I need when it's surrounded by all that unnecessary data. With PowerLock SecurityAudit, I can focus on the issues that are important to my environment, with easy-to-read reports that highlight exactly the information I specify.”

POWERLOCK® SecurityAudit

Highly detailed security auditing for the iSeries and AS/400

Are you wasting time sorting through hundreds of pages of reports over and over again when you need to find just one piece of information that would help?

Stop wasting time today—get PowerLock SecurityAudit, so you can start focusing on finding the answers instead of wading through data. A security auditor's job is a difficult one, sifting through data to find out “who” did “what”, as well as “when” and “how” they did it, all in an effort to find out “why?”

Need a sound solution for “policy management”?

With PowerLock SecurityAudit, policies can be set and monitored quickly and easily. You set the rules and then monitor and control all transactions on your iSeries and AS/400 systems to insure users stay within the set perimeters. PowerLock SecurityAudit provides the necessary tools for auditors and system administrators to run reports easily. Effectively manage how users are accessing your system and the activity within that system as well. You have the ability to manage a sound security policy within your environment.

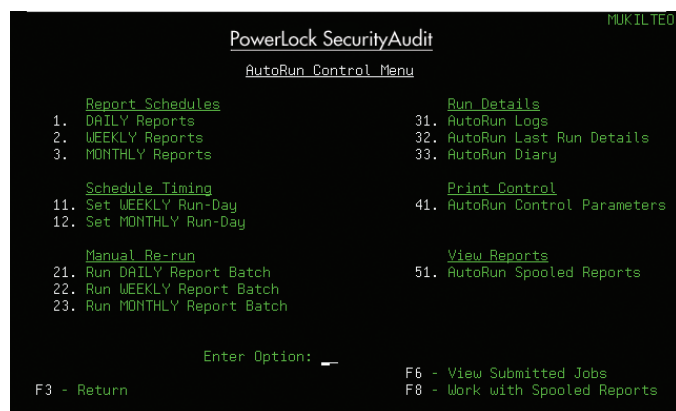

Figure 1: PowerLock SecurityAudit makes it easy to customize reports, giving auditors and security officers the power to focus only on the information they want. Reports can also be scheduled to run automatically to maximize efficiency.

PowerLock SecurityAudit does the hard work of sorting through iSeries and AS/400 generated reports to find exactly the information security officers and system administrators need.

FEATURES & BENEFITS

- **Lots of iSeries and AS/400s to audit?** No problem for PowerLock SecurityAudit. The software installs (and un-installs) in minutes, providing powerful tools for security officers and auditors on the go. They can “carry” PowerLock SecurityAudit for quick, but thorough, spot checks.
- **No time to wait for reports?** Generate reports to run anytime around your schedule. Run what you want to see when you want to see it ensuring continuous monitoring of security events.
- **Who has done “what?” and “when?”** “Drill-down” to find out more information when you need it most. Find all users who initiate jobs on the iSeries and AS/400, for example, then focus in to find which specific commands were used, then go further to find out who used them.
- **Can I monitor objects?** Yes, PowerLock SecurityAudit allows you to identify a set of objects including files, user profiles or system values. You can closely monitor these objects for any changes.
- **What has changed since my last audit?** Discover what has changed since the last audit using the PowerLock SecurityAudit Diary. The Diary provides a quick view of changed values and access to sensitive data all from a single screen—saving hours of reading paper reports.
- **Will SecurityAudit increase auditor efficiency?** Yes! Dramatically! “We reduced total on-site audit time from 2-3 weeks to as little as 2-3 days”, says one client.
- **Do you need more than an auditing tool?** You can plug security holes quickly when you integrate PowerLock SecurityAudit with PowerLock NetworkSecurity—which provides in-depth security auditing, intrusion detection and powerful access control.

ABOUT THE POWERTECH GROUP

The PowerTech Group is a global leader in iSeries security technology and services. Founded in 1996 by a team of leading AS/400 security experts, PowerTech helps clients such as the Lear Corporation, Shell Canada, Banc of America and Peregrine protect their mission-critical data. PowerTech is a member of the IBM PartnerWorld for Developers and recently won the iSeries Honor Roll Award for its flagship product, PowerLock® NetworkSecurity. The PowerTech Group's management team and technology staff consists of many well-known and respected security experts, who lead a dynamic team of security software developers and consultants. The PowerTech Group advises iSeries and AS/400 customers around the world on key security topics. A strong relationship with IBM allows PowerTech to continue to develop security tools that take advantage of the latest technology and build upon the sound security architecture of the iSeries 400.

www.powertechgroup.com

PowerLock SecurityAudit is designed from the ground-up by AS/400 security experts to provide powerful, flexible reporting tools needed to quickly and efficiently uncover potential and real threats to iSeries and AS/400 security environments.

PowerLock SecurityAudit goes beyond OS/400's reporting capabilities, providing auditors and system administrators with the power to review complete environment history or just exceptions. It draws from the OS/400 Audit Journal and presents information in easy-to-read reports. Unwanted data can be filtered out so the investigation can focus on only the information required (see Fig. 1).

Figure 2: PowerLock SecurityAudit generates a report showing disabled user profiles, allowing the system administrator or auditor to quickly see who has access to what.

Save time and money now. PowerLock SecurityAudit provides the most comprehensive iSeries and AS/400 auditing and reporting tools available today. With powerful, flexible reporting, quick installation and the unique Diary feature, PowerLock SecurityAudit helps auditors and security professionals save time and stop wading through piles of paper reports. You can start to focus on finding solutions to everyday security problems—before they harm your organization.

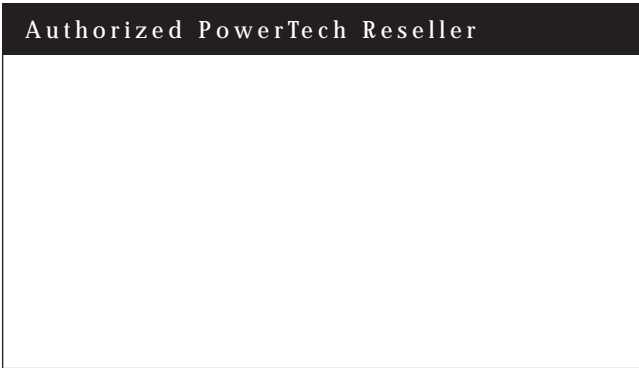

Hardware/Software Requirements:

- OS/400 V4R3 or higher
- 34 MB of disc space plus journal space

Let the PowerTech Group help you ensure your systems meet the increasingly demanding security requirements in today's networked world. Our PowerLock® family of security products contains a complete line of solutions that provide dependable auditing, intrusion detection and reporting. All PowerTech products are backed by industry leading technical support, available around the clock.

The PowerTech Group can also provide a wide range of professional services—from security architecture design to independent security audits. Call us today for more information on PowerTech SecurityServices.
