

“The PowerLock SecuritySuite provides our system administrator the power needed to establish and maintain our organization’s day-to-day security configurations...and our security officer the ability to review them quickly and effectively, as well as pinpoint security issues before they become a major problem.”

# POWERLOCK® SecuritySuite

Comprehensive auditing, reporting & access control for the iSeries and AS/400

Where do the threats to your iSeries and AS/400 data come from? How do you find out?

PowerLock SecuritySuite helps find out “who” is accessing “what” on the iSeries and AS/400, “when” it is done, and “how” they got there. Armed with this information, protective measures can be put in place to prevent unauthorized access—now.

Am I at risk for a security breach?

If there are PCs connected to the iSeries and AS/400 then your data is at risk. Easy-to-use point-and-click tools available on the PC desktop make it a cinch for even novice users to cause serious damage to your precious data or simply copy it and sell it to your most fierce competitor.

## FEATURES & BENEFITS

- **Front-line security for the iSeries and AS/400.** PowerLock NetworkSecurity can quickly detect intrusions via the network, and provide a permanent, secure audit journal of all attempted unauthorized access. Utilizing this information, security administrators can determine where strengthening is needed to provide a secure network environment.
- **Feed information on attempted security breaches to real-time messaging tools.** With PowerLock NetworkSecurity you can receive information about exceptions as they happen and do something to stop it now.
- **Access control for more than 200 network application functions.** PowerLock NetworkSecurity’s intuitive user interface allows administrators to establish, monitor and manage the rules to create secure network access to the iSeries and AS/400.
- **Save valuable time.** PowerLock SecurityAudit does the hard work of sorting through large and complex OS/400 reports to find the information auditors and system administrators need about exceptions. The exceptions identified can indicate potential security problems.
- **See your reports in a concise and easy-to-read format.** The reports generated by PowerLock SecurityAudit contain what you want to see and can be configured quickly. Users have saved thousands of hours of administrator and auditor time, by increasing the accuracy of their audits. Why not join them today and start working more efficiently?
- **Drill-down to see which specific commands were used, and by whom.** PowerLock SecurityAudit can quickly report on users initiating jobs. It can also provide a “snapshot” of system changes from a single screen, an easy way to maintain system integrity.

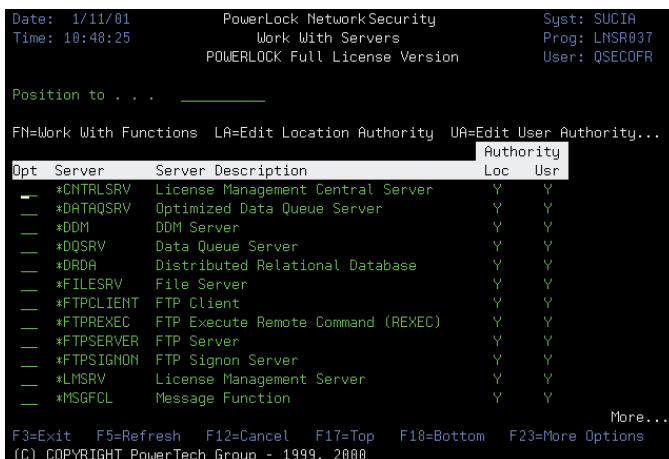

Figure 1: The NetworkSecurity component has an intuitive “dashboard” from which users have direct access to all the intrusion detection, access control and security auditing features—all in one screen.

The PowerLock SecuritySuite addresses iSeries and AS/400 security concerns with powerful tools that are integrated with OS/400’s security features to ensure that private data stays private.

The components of the PowerLock SecuritySuite, NetworkSecurity and SecurityAudit, work together to provide a complete security environment. Establish, manage and maintain a security policy quickly and effectively.

The PowerTech Group is a global leader in iSeries security technology and services. Founded in 1996 by a team of leading AS/400 security experts, PowerTech helps clients such as the Lear Corporation, Shell Canada, Banc of America and Peregrine protect their mission-critical data. PowerTech is a member of the IBM PartnerWorld for Developers and recently won the iSeries Honor Roll Award for its flagship product, PowerLock® NetworkSecurity. The PowerTech Group's management team and technology staff consists of many well-known and respected security experts, who lead a dynamic team of security software developers and consultants. The PowerTech Group advises iSeries and AS/400 customers around the world on key security topics. A strong relationship with IBM allows PowerTech to continue to develop security tools that take advantage of the latest technology and build upon the sound security architecture of the iSeries 400.

- **Run reports around your schedule.** Configure the reports needed, and schedule them to run at your convenience. They are ready and waiting when you need them daily, weekly, or even hourly. PowerLock SecurityAudit continuously monitors and provides information on your security environment areas, putting the information at your fingertips. Easy-to-read reports leave out the clutter, allowing you to focus on the important information.
- **Exceptional value** is provided by pairing PowerLock NetworkSecurity and PowerLock SecurityAudit together in one cost-effective package. You get superior functionality and quality at an affordable price.

Let the PowerTech Group help you ensure your systems meet the increasingly demanding security requirements in today's networked world. Our PowerLock® family of security products contains a complete line of solutions that provide dependable auditing, intrusion detection and reporting. All PowerTech products are backed by industry leading technical support, available around the clock.

The PowerTech Group can also provide a wide range of professional services—from security architecture design to independent security audits. Call us today for more information on PowerTech SecurityServices.

For more information on existing and upcoming products in the PowerLock family of security products, or for information on the PowerTech Group, Inc. please visit our Web site at [www.powertechgroup.com](http://www.powertechgroup.com) or call us at 253.872.7788.

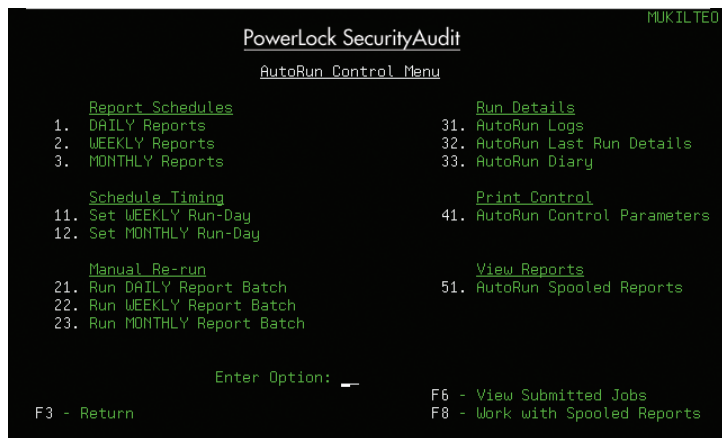

Figure 2: PowerLock SecurityAudit makes it easy to customize reports, providing auditors and security officers only the information they need to make key security decisions. Reports can also be run automatically—increasing efficiency and saving time.

Hardware/Software Requirements:

- OS/400 V3R7 or higher
- 21 MB of disc space plus journal space for PowerLock NetworkSecurity component
- 72 MB of disc space plus journal space for PowerLock SecureAudit component
